

Save 80% on Cloud Storage Costs with SoftNAS

Reduce Data Storage by 30% – 60%

Eliminate the Storage Tax – Don't Pay Twice for Storage

Enterprise-Grade Cloud NAS

The proven storage technology of SoftNAS saves significant cloud storage costs as part of a company's overall IT cloud infrastructure for deployment on AWS, Azure and VMware. SoftNAS assures enterprise customers achieve high performance data storage and access through built-in compression, deduplication and relocation features. Customers from many industries including Halliburton, Campbell's, Netflix, Samsung, Petronas, and RSA deploy SoftNAS in their infrastructure.

SoftNAS Features

- **Data Cost Control** – As storage doubles every 2 years SoftNAS becomes a valuable component of your cloud solution. Reducing the amount of data stored with various compression techniques minimizes cloud storage expenses.
- **Data Performance** – Increasing performance doesn't require more storage, instead take advantage of SoftNAS flexibility by operating with a variety of disk types, IO loads, and private storage.
- **Data Availability** – Capable of delivering 99.999% uptime. Our patented cross-zone high availability technology duplicates data across zones to ensure data access when needed.
- **Data Migration** – File synchronization and migration services offer continuous data transfer. Our "Lift and Shift" utility enables this service in active production applications without any service downtime. Our bulk data movement technology provides up to 200% faster transfer even over high latency, noisy networks.
- **Data Control & Security** – SoftNAS comes standard with built-in security offerings such as snapshots, rollbacks, and two-factor-authentication. In addition, high-performance protocols such as iSCSI, NFS, and CLFS/SMB are standard.

“We have extensively tested replication across availability zones, failover and failback features of SoftNAS Snap HA and found all features worked with no problems. Fortunately, the SoftNAS NAS has ran so well that we have never seen a failover while in production, but we are glad we have the piece of mind that HA is there in case we need it.”

– Suresh Babu Marella, Senior Director,
Cloud Infrastructure, HighRadius
