

# SoftNAS™ Cloud for VMware® vCloud® Hybrid Service™

The no compromise safety net for mission-critical data in the cloud.

*“SoftNAS Cloud was the first NAS filer to be certified as VMware Ready - vCloud on vCHS, exposing the rich set of hybrid and pure cloud capabilities vCloud Hybrid Services delivers to customers.”*

— Eric Olson, Director of Products  
SoftNAS LLC

## Pure vCHS Clouds

For VMware® customers in need of enterprise-grade shared data in the vCHS cloud:

- SaaS applications
- Mobile applications
- Pure cloud applications
- Cloud migrations
- Cloud desktops
- Legacy applications

## Hybrid vCHS Clouds

For VMware customers in need of non-stop hybrid cloud solutions for disaster recovery and business continuity:

- Off-site backups
- Disaster recovery
- Hybrid clouds

## Powerful, frictionless, agile storage software to protect business data in the vCHS cloud.

Nothing is more critical to the continuity of your business than your data. Like the blood in your veins, it has to be safe and available 100% of the time.

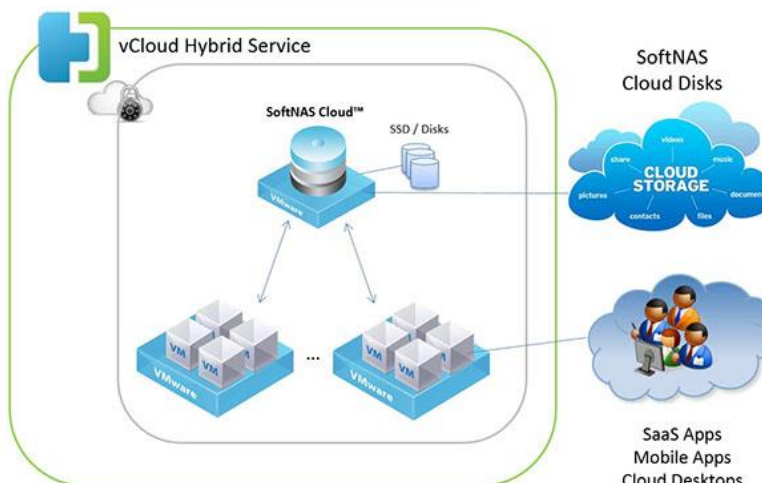

SoftNAS™ offers the mission-critical data protection and high-availability required for the non-stop operation of your business. And SoftNAS is easy to try, buy and deploy across public, private and hybrid clouds. SoftNAS Cloud and vCloud® Hybrid Service™ enable customers to quickly and easily implement hybrid and pure cloud business solutions that ensure corporate data is always safe and available and applications do not experience downtime.

## SoftNAS Cloud and vCloud Hybrid Service

SoftNAS is a software-defined NAS filer, delivered as a virtual storage appliance, that runs across the ESXi and VMware vCHS environments. SoftNAS provides enterprise-grade NAS capabilities, including patent pending Hybrid HA™ cross-data center high-availability with automatic failover that keeps data flowing, even when disaster strikes.

SoftNAS offers the mission-critical data protection and high-availability required for non-stop operation of business applications, websites and IT infrastructure on vCHS. SoftNAS runs within the customer's own vCHS account and provides a no compromise safety net for business information in the vCHS cloud.

## Hybrid HA™ with vCloud Hybrid Service

Deploy hybrid clouds quickly and easily using VMware and vCloud Hybrid Service. SoftNAS connects vCHS and ESXi data centers at the storage layer, replicating data in near real-time for off-site backup and DR. Unique Hybrid HA seamlessly enables flexible operation of workloads across premise and cloud data centers for non-stop virtualization and storage services spanning the secure hybrid cloud.

For applications that are purely cloud hosted in vCHS, SoftNAS Cloud provides the enterprise-grade NAS features and cloud storage extensions that support a broad range of use cases, including SaaS and applications that are born in the cloud.

## How it Works

SoftNAS Cloud runs as a virtual storage appliance within ESXi and vCHS. It adds NAS filer features on top of block and cloud object storage as NFS, CIFS and iSCSI shared storage. SoftNAS Hybrid HA and SNAP HA™ technologies combine with VMware and vCHS technology to make seamless hybrid clouds a reality today.
