

Buurst Fuusion Overview

Realize the Untapped Value of Business Data

Every day, corporations create massive amounts of data that is often difficult to access and secure, let alone synthesize. Business process management teams such as data engineers and data scientists are looking for innovations in data processing and visualization to meet their current needs and scale for the expected rapid growth in data creation. With that growth expected to be a staggering 50% at the edge it is critical to deploy a solution built for the future.

Buurst Fuusion provides a complete lifecycle process for data from consolidation, transfer, and formatting to final processing for results. Accessing data from object storage, data lakes, file storage and edge sites, Fuusion enables AI/ML, cognitive and analytic servers, and other centralized processing needs at enterprise scale.

Fuusion Features

- **Simple** - Built on the open source Apache NiFi platform, Fuusion provides a simple yet powerful drag, drop, configure and go platform
- **Fast** - Built into Fuusion is UltraFast™, a patented network transfer protocol to rapidly move sizable amounts of data over latency-challenged networks
- **Accountable** - Built into the entire lifecycle process is data provenance ensuring a chain of custody record for all data processed
